Solutions and services for telemedicine

> **Continuity of care**
> **Tele-expertise**
> **Exam sharing**
> **Teleradiology**

More than 250 establishments already use ETIAM-Connect. Almost 100 millions images have already been exchanged with ETIAM's teleimaging solutions and services.

Connect healthcare professionals in real-time

The solution to organize the exchange of medical data and their clinic context between establishments.

ETIAM-Connect meets the needs and constraints of medical image exchanges for tele-expertise and telediagnostic.

It allows healthcare professionnals to **exchange files with patient's images and complementary data**. A doctor in touch with the patient can create a file for him or her, send it to a referent doctor who consult it and complete it before sending it back.

A file gathers **the needed data to realize a tele-expertise or a tele-diagnostic** : identity of the patient and of implicated professionals, a selection of images, request and answer forms.

ETIAM-Connect permits to allowed professionals to consult and complete those information, to vizualise and transfert images. **It can be specialized** for a given context of use : a request of radiological opinion, of neurosurgical advice...

It integrates itself easily in doctors' practices who **use it with a web browser** and their **usual imaging equipments** (modalities, PACS stations, post-treatment stations...)

ETIAM-Connect **meets confidentiality enquiries** by the secure of imaging files exchanges through Internet and by authorizing their access only to concerned profesionnals. It also ensures **the tracability** of exchanges and accesses.

Adressing all mobility requirements

10 modules to satisfy your needs

Tele-imaging

Transmit patient images securely. Ability to connect remotely to retrieve patient data from outside the institution

Stroke consultation

Provide expert consultations for stroke diagnosis 24/7 anywhere with a connected device using a wide range of imaging and telemedicine tools

Tele-radiology

Send remotely patients' EHR with documents, images and videos to obtain second opinions and definitive diagnosis without the radiologist at the patient's side.

Teledermatology

View photos or live videos of the infected area of the skin, umpload to the platform and perform remote diagnosis

Remote Consultation

Remote consultation helps people in rural areas or disabled to access to quality care. Provide remote consulting, follow-up and send prescriptions using video-conferencing

Collaboration

Organize meetings and discussions on patients' cases and studies to provide a better quality of care

Expertise

Request the opinions of colleague(s) within or outside the institution. Share medical images and documents within the same window.

Tele-EEG

Send and receive pediatric examinations and clinical data

* secure data transfer
* SaaS subscription
* pay-per-use

Video-conferencing

Exchange ideas and opinions with peers via a secure video-conferencing platform

Tele-neurology

Easily exchange images and studies of patients to get a real-time, accurate diagnosis. Save time and provide effective care.
